

**A METHOD AND APPARATUS FOR PROVIDING MOBILE-TO-MOBILE VIDEO
CAPABILITY TO A NETWORK**

ABSTRACT OF THE DISCLOSURE

[0061] This invention relates to a method and apparatus for providing mobile-to-mobile video capability to a network. More particularly, this development is directed to a system that facilitates the transmission of video data from one mobile station (e.g. wireless phone) to another mobile station (e.g. another wireless phone). It also provides user control of the transmission to accommodate the preferences of the called party relative to receipt of the data.
